

**BASSIN
D'ARCACHON**
SIBA

Workshop December 15th 2021

Water quality and micropollutants – from BIGDATA to ACTION

PART I: FRESH AND MARINE WATERS

9.30 How to develop a sampling strategy adapted to **diffuse pollution**?
10.15 Example of the Arcachon Bay

10.15 **How to analyze the results efficiently for coherent and relevant actions?**
11.00 **Data bases - Optimizing data use**

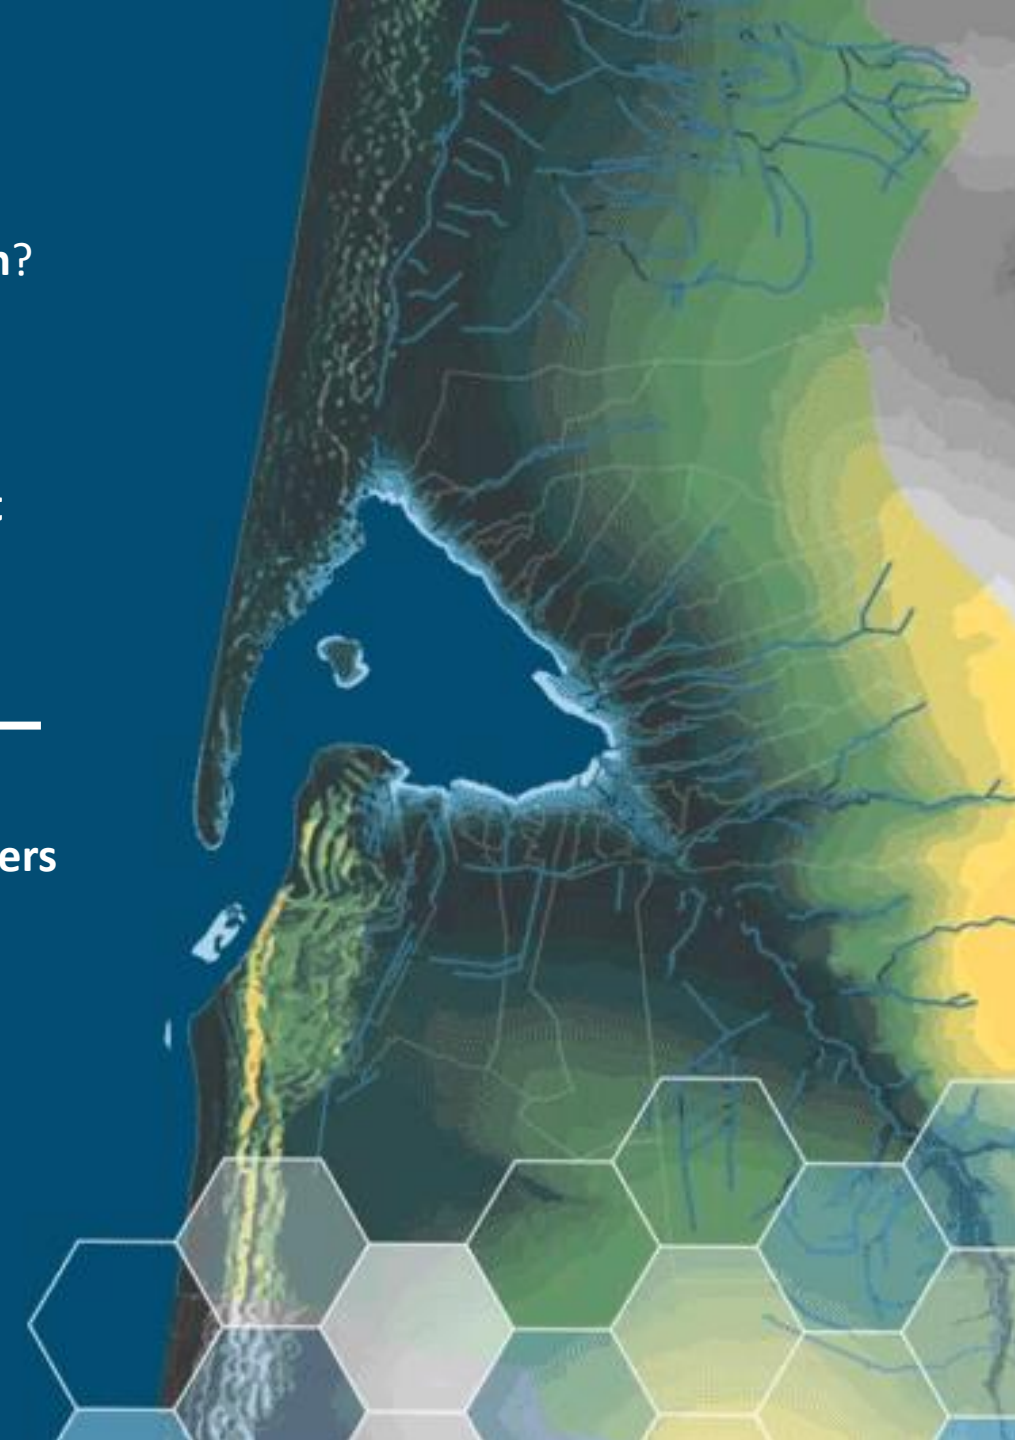

Break

11.15 **Example of actions to reduce footprint in fresh and marine waters**
12.00

PART II: WASTE WATER TREATMENT

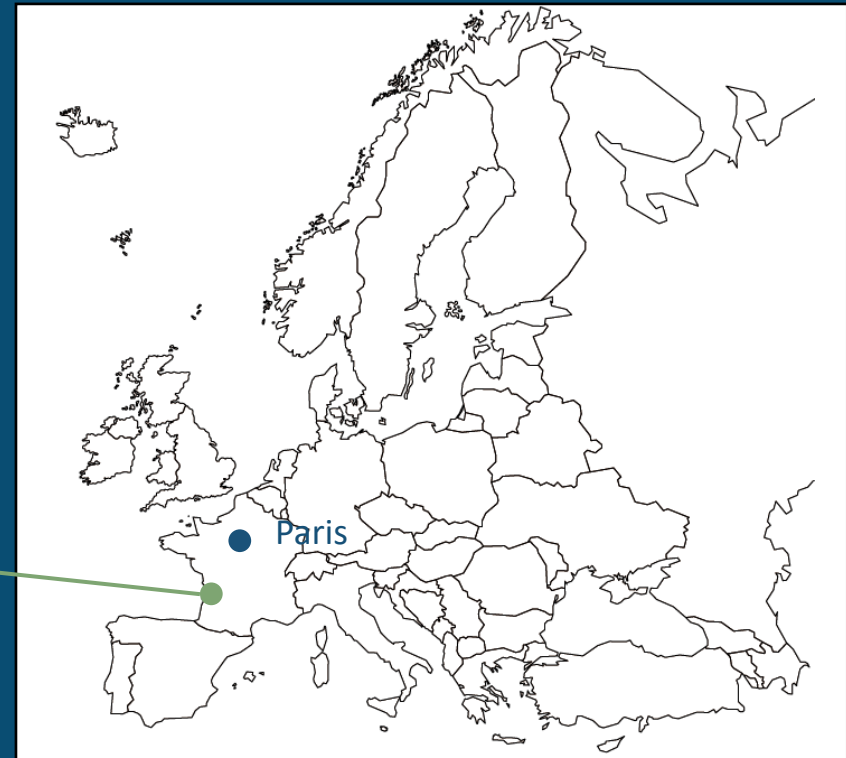

12.00 **From microbiology to micropollutants**
12.45 Systems and treatments currently in use on our territory

12.45 Questions, Conclusions and Open call for further cooperation
13.00

How to develop a sampling strategy adapted to **diffuse pollution**?

Example of the Arcachon Bay

Some context...

807 M vs 423 M

~ Tides ~

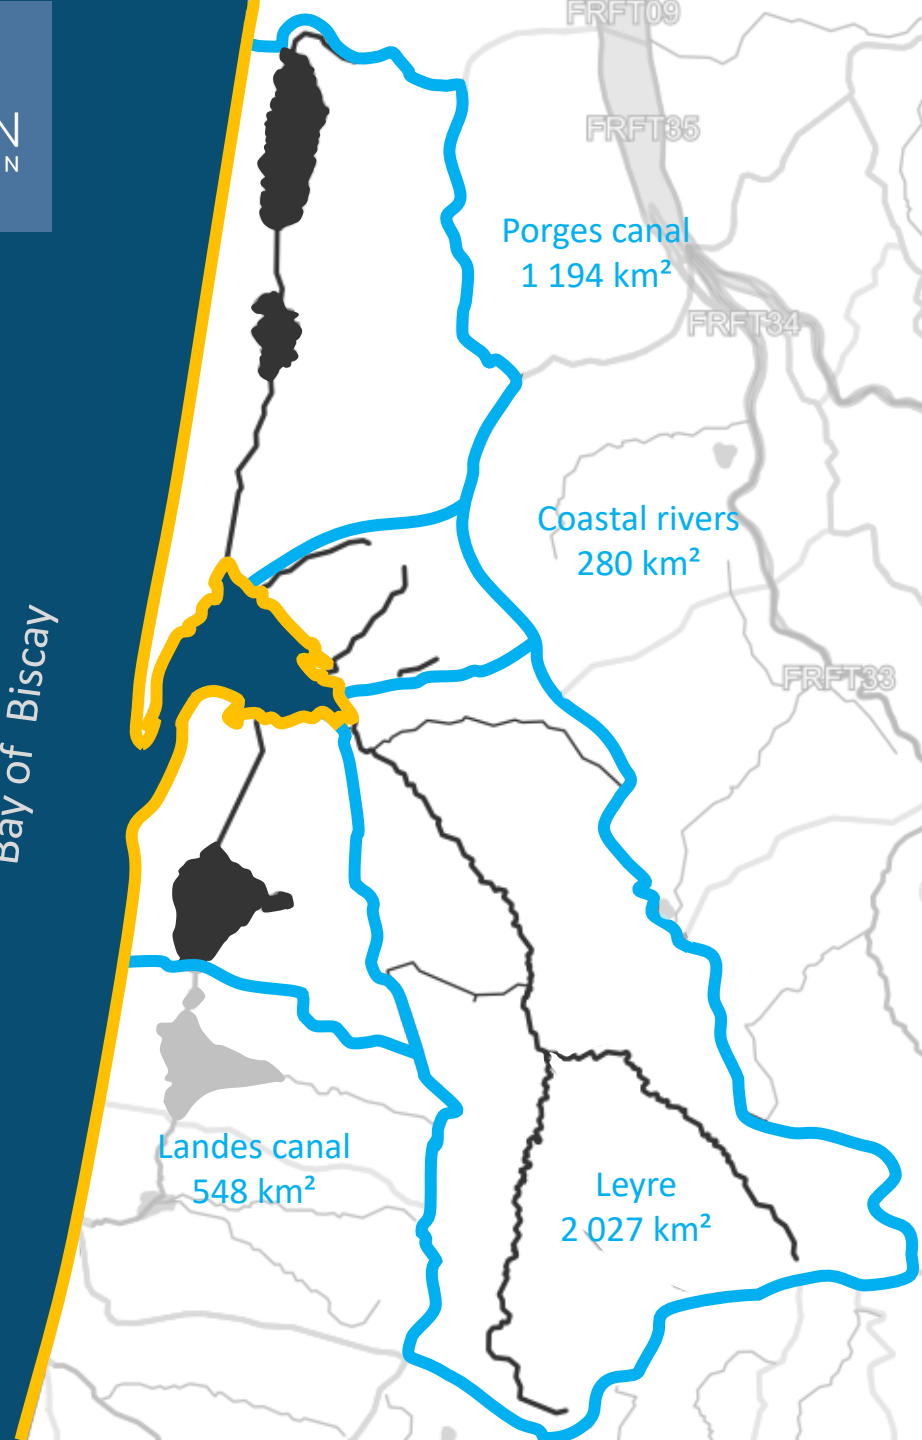

Macrotidal
(~ 2 to 4 m)

Semi-diurnal

Asymmetric

Bay of Biscay

160 000 inhabitants
sea products
boating
tourism
agriculture
protected

Where does the contamination coming from?

What do we look for?

Surveys
Local uses
Experts opinion
...

Screening

Do we find them?

Reduced relevant list
of compounds

Regulation evolution
New compounds (metabolites)
Technical progress (chemistry)

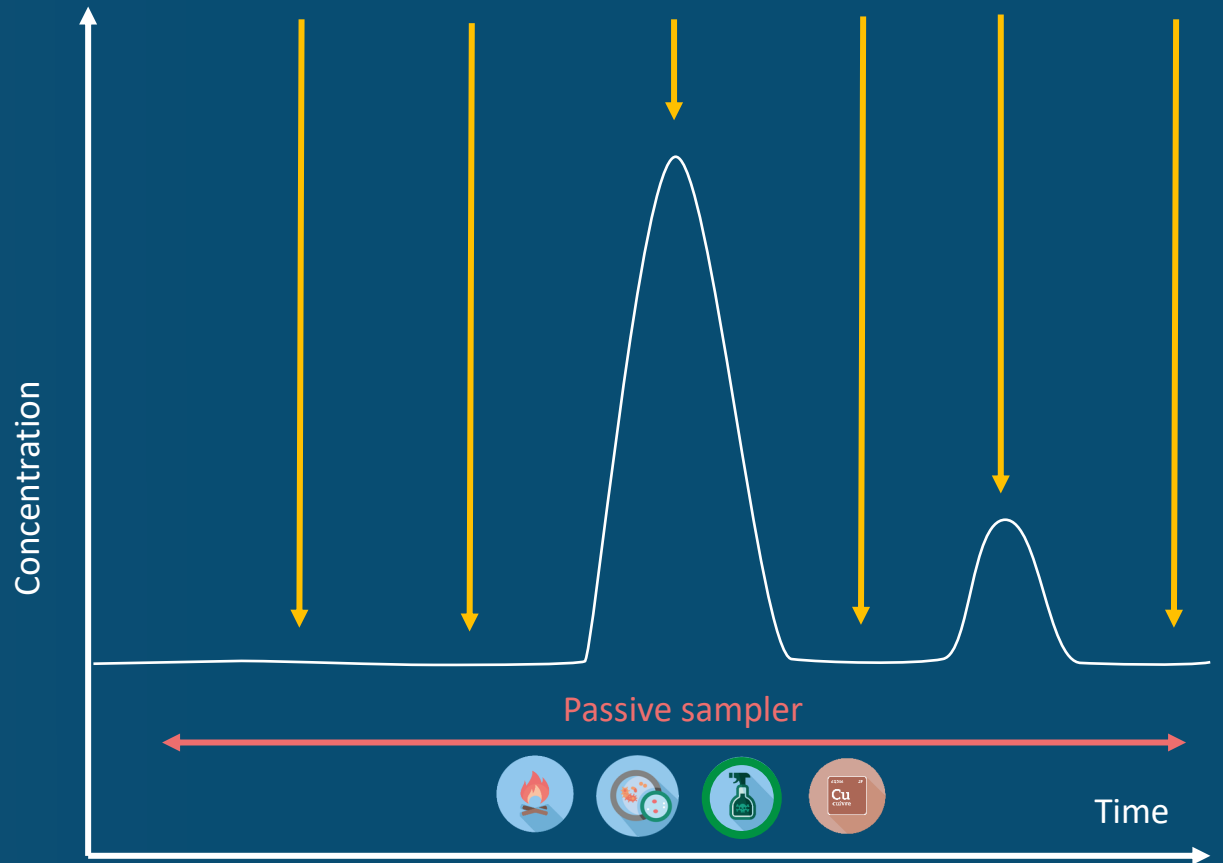

How do we look for them?

Speciation / chemical form

Discrete samples

Sample representativity

Where do we search them?

- Catchment areas

Rivers, channels...

- Internal areas

“Bird Island”, channels...

- Oceanic areas

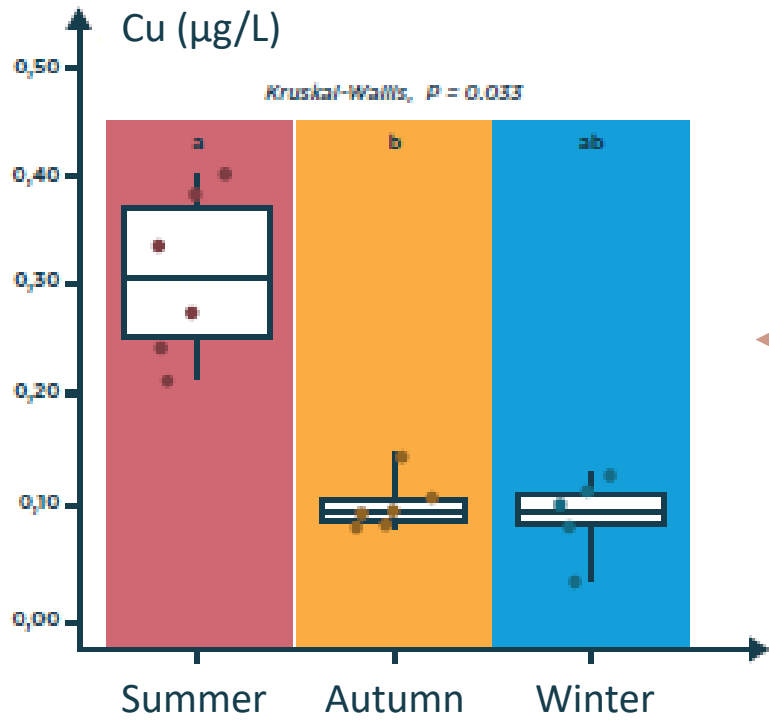

Arguin sandbar and the Ferret Peninsula

When do we look for them?

Adapting the frequency to seasonality

Example of cybutrin – discrete sampling

Cybutrin
(ng/L)

● 0004-ARGUIN – Irgarol – (ng/L)
▲ 0002-PIQUEY – Irgarol – (ng/L)

◆ 0003-COMPRIAN – Irgarol – (ng/L)

■ 0001-GRANDBANC – Irgarol – (ng/L)

Example of the metolachlor – discrete sampling

Metolachlor
(ng/L)

○ Spatial

Pesticides : 4 rivers + 2 sites in the Bay

Nutrients and microbiology : 8 rivers

Metals : 3 sites in the Bay

UVF : 3 beaches

○ Frequency

Pesticides : 1 / 2 months

Nutrients and microbiology : 1 / month

Metals : X 3 in summer and X 2 in winter

Conclusion

○ A diffuse pollution...

...is challenging to address !

...requires good knowledge of the territory

...requires to developping a specific methodology

○ We still wonder...

...how to find non targeted molecules?

...how to assess the risk with accuracy?

...how to get to practical measures?

Open Discussion : Experience of other territories

How to develop a sampling strategy adapted to **diffuse pollution**?

PART I: FRESH AND MARINE WATERS

9.30 How to develop a sampling strategy adapted to **diffuse pollution**?
10.15 Example of the Arcachon Bay

10.15 **How to analyze the results efficiently for coherent and relevant actions?**
11.00 **Data bases - Optimizing data use**

Break

11.15 **Example of actions to reduce footprint in fresh and marine waters**
12.00

PART II: WASTE WATER TREATMENT

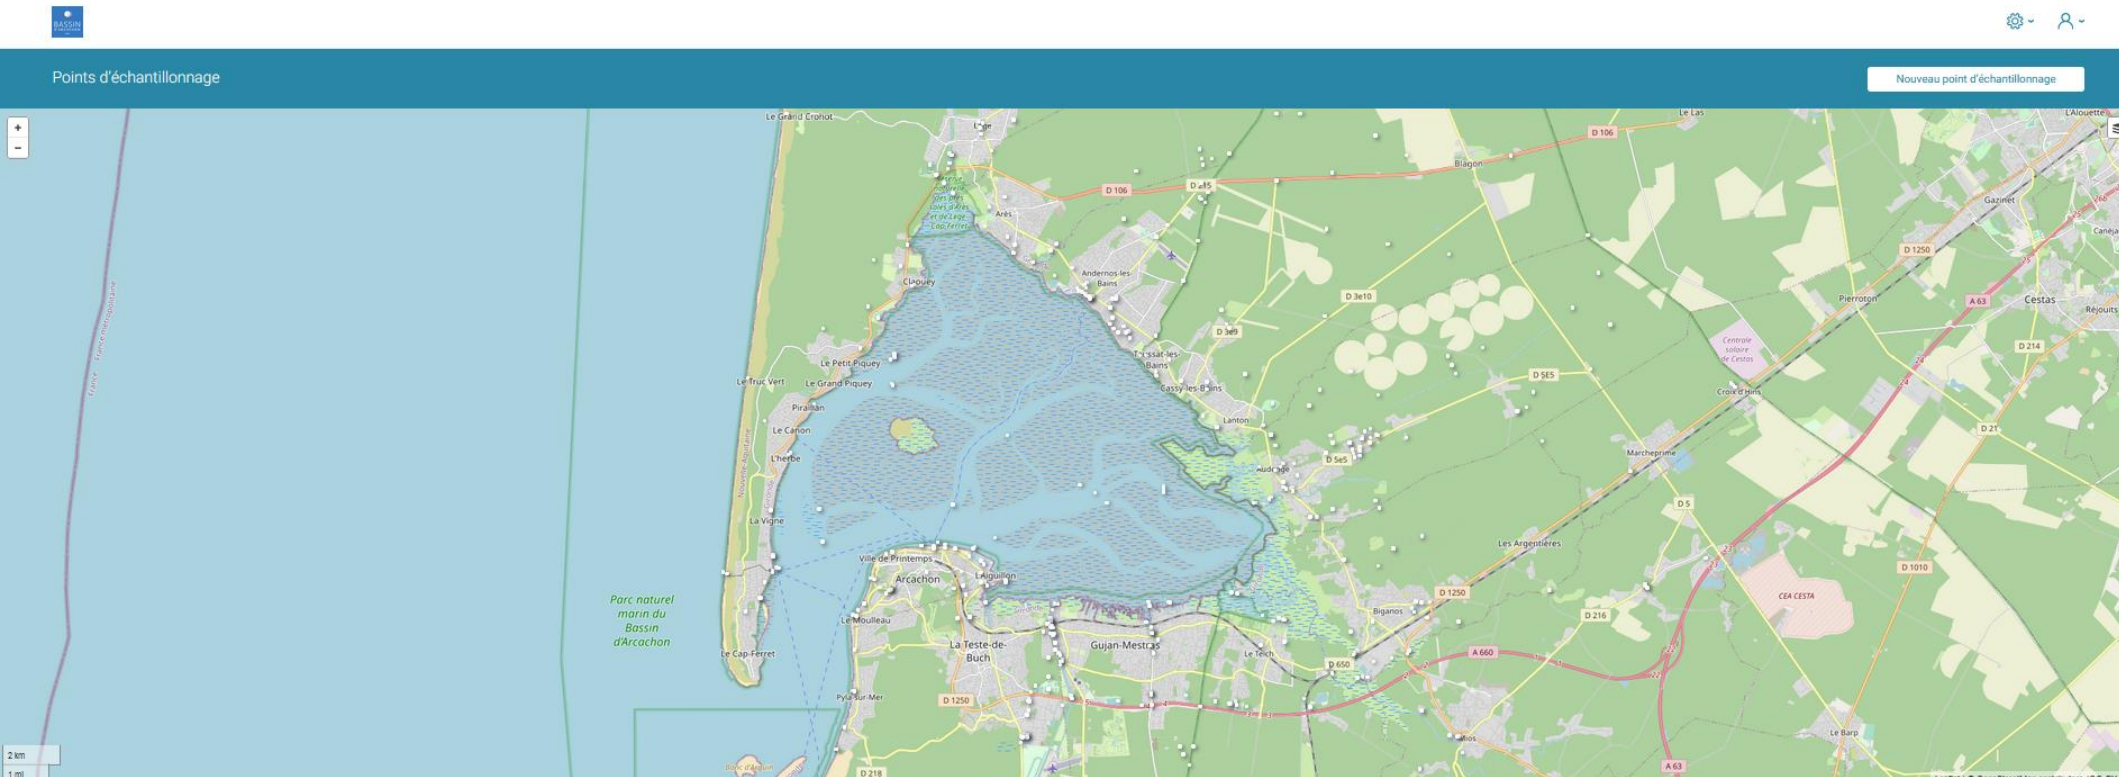

12.00 **From microbiology to micropollutants**
12.45 Systems and treatments currently in use on our territory

12.45 Questions, Conclusions and Open call for further cooperation
13.00

How to analyze the results efficiently for coherent and relevant actions?

Data bases - Optimizing data use

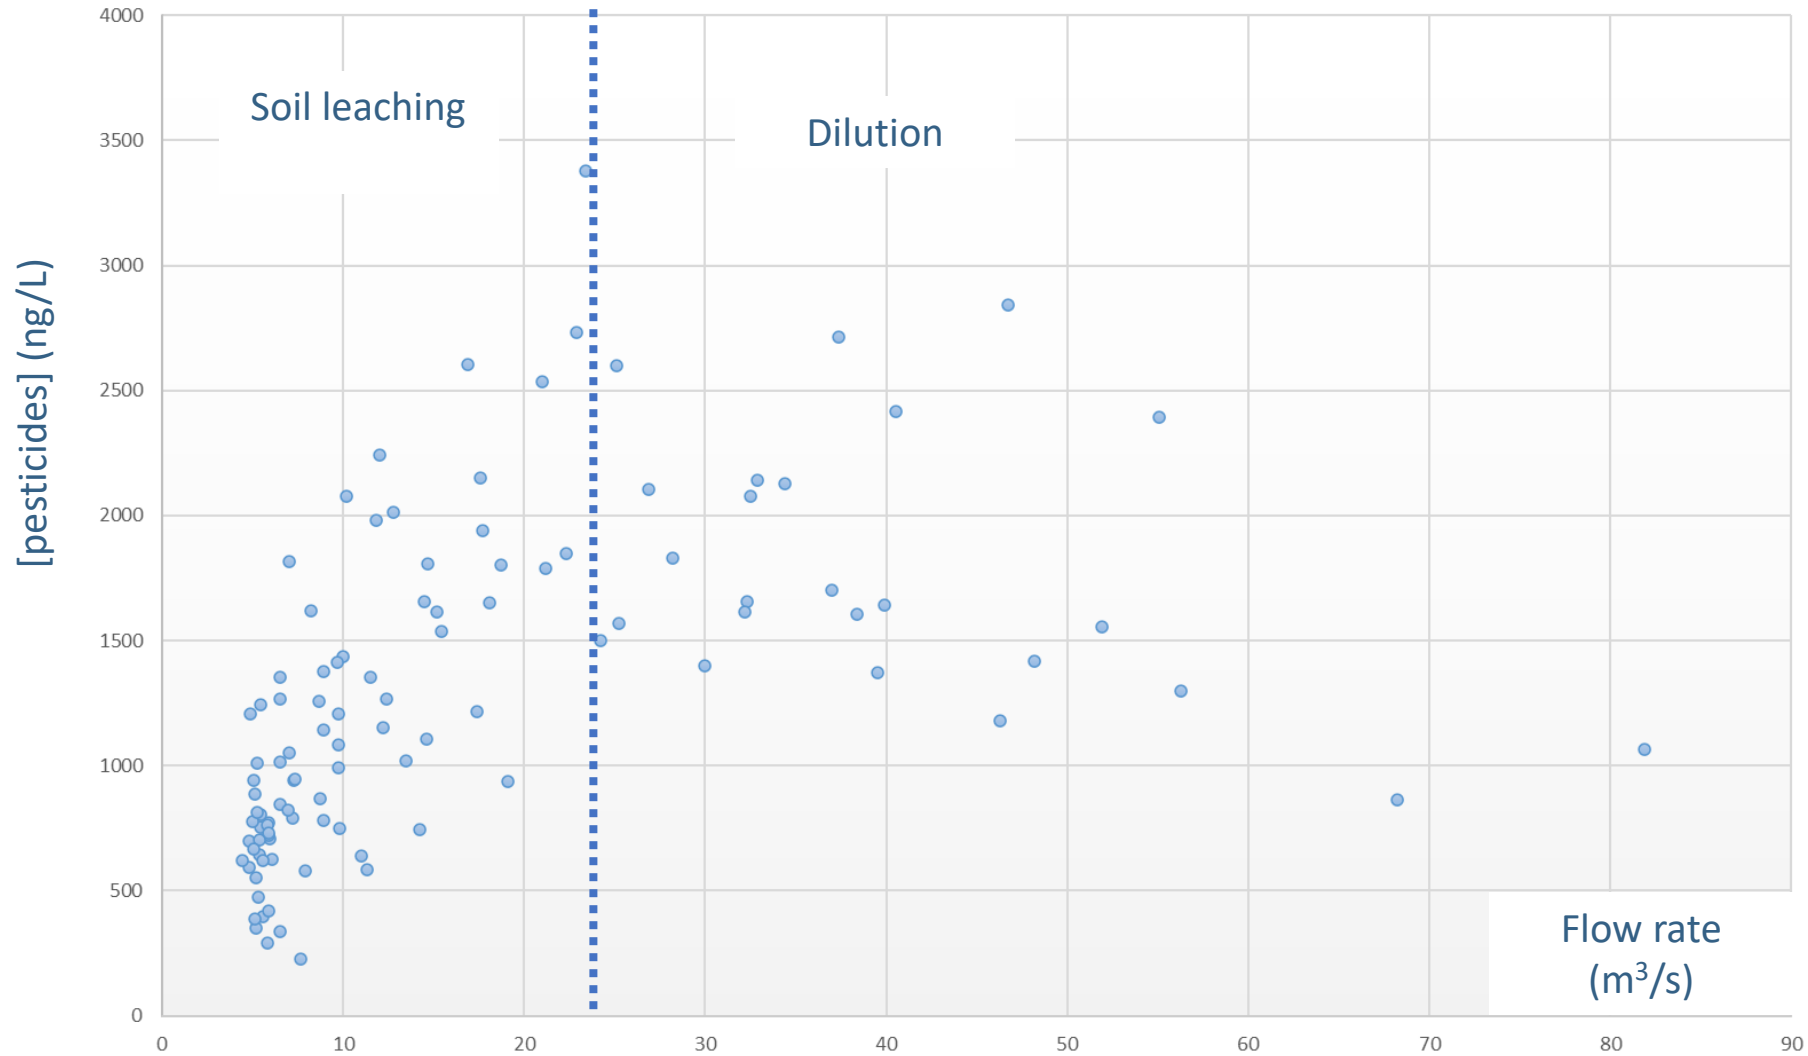

For instance...

Water level monitoring

For instance...

Concentrations
Relevant regarding
organisms exposure

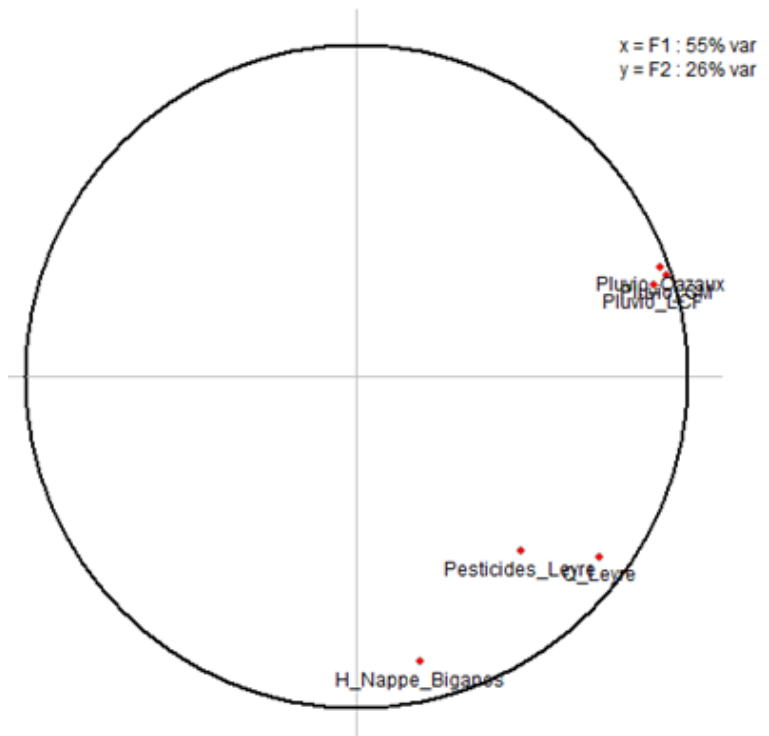

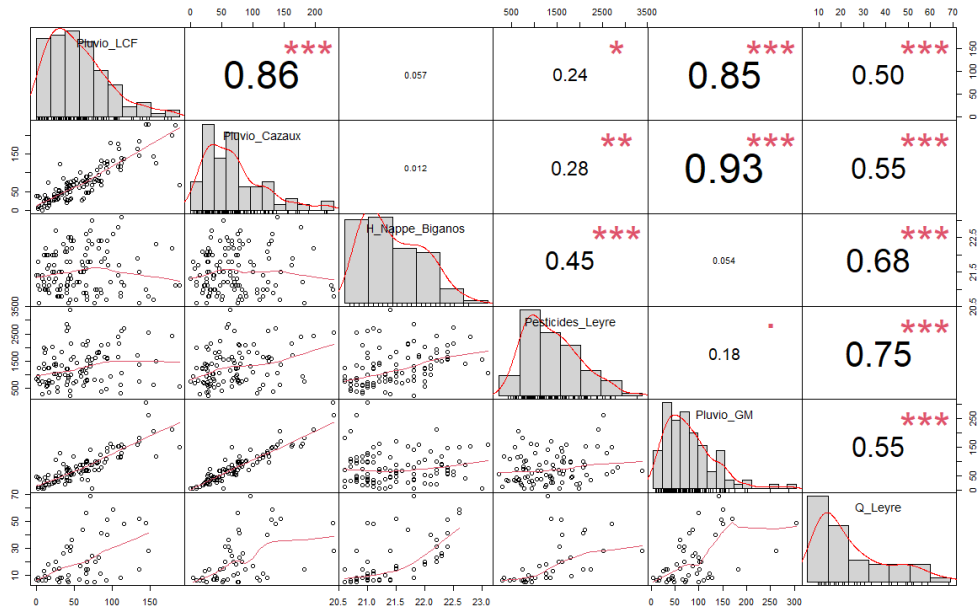

For instance...

Fluxes

Relevant regarding
contaminants inputs
into the Bay

For instance...

Environment effect

Various correlations between [pesticides] and environmental parameters (groundwater level, rainfall...)

Conclusion / Open Discussion

- Databases are a great tool ...

- ...for traceability

- ...for data archiving

- ...for cross project work

- A good start but...

- ...how can we go further?

- ...how can we sort our data?

Data mining?

PART I: FRESH AND MARINE WATERS

9.30 How to develop a sampling strategy adapted to **diffuse pollution**?
10.15 Example of the Arcachon Bay

10.15 **How to analyze the results efficiently for coherent and relevant actions?**
11.00 **Data bases - Optimizing data use**

Break

11.15 **Example of actions to reduce footprint in fresh and marine waters**
12.00

PART II: WASTE WATER TREATMENT

12.00 **From microbiology to micropollutants**
12.45 Systems and treatments currently in use on our territory

12.45 Questions, Conclusions and Open call for further cooperation
13.00

Example of actions to reduce footprint in fresh and marine waters

Land use : 11% of agriculture (corn)

Chemical signature : herbicides
(Metolachlor / ESA / OA)

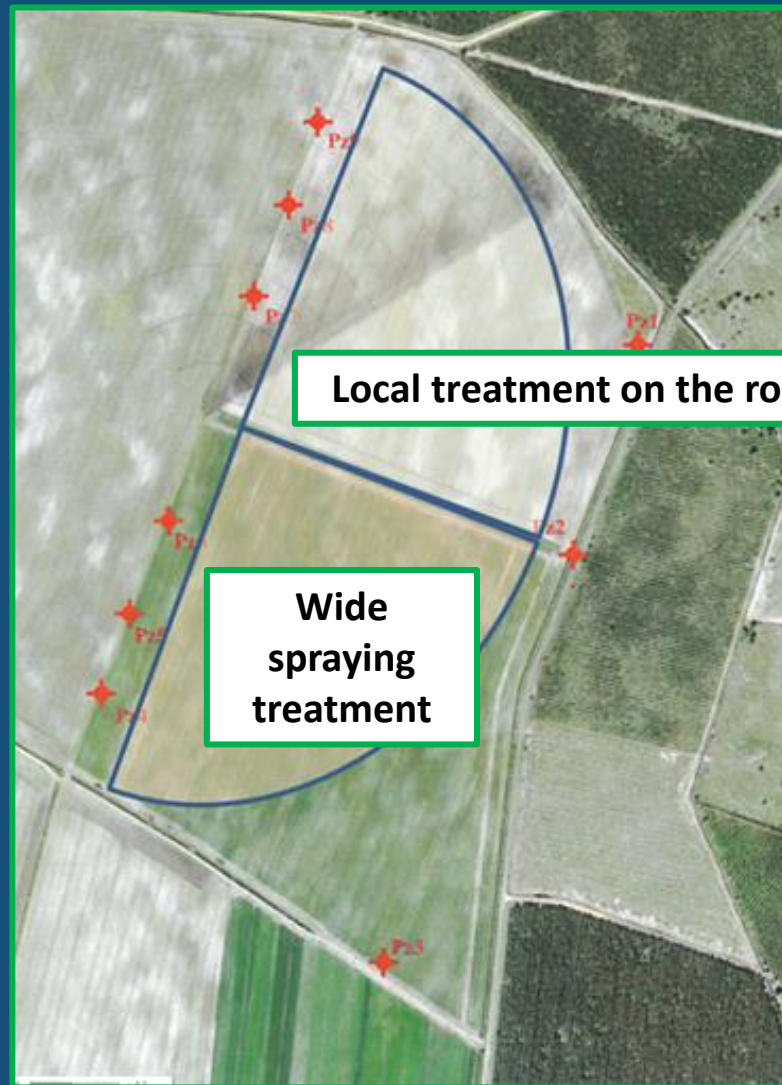

An experiment to encourage the transition

1 farmer

2 tests fields

2 herbicides application methods

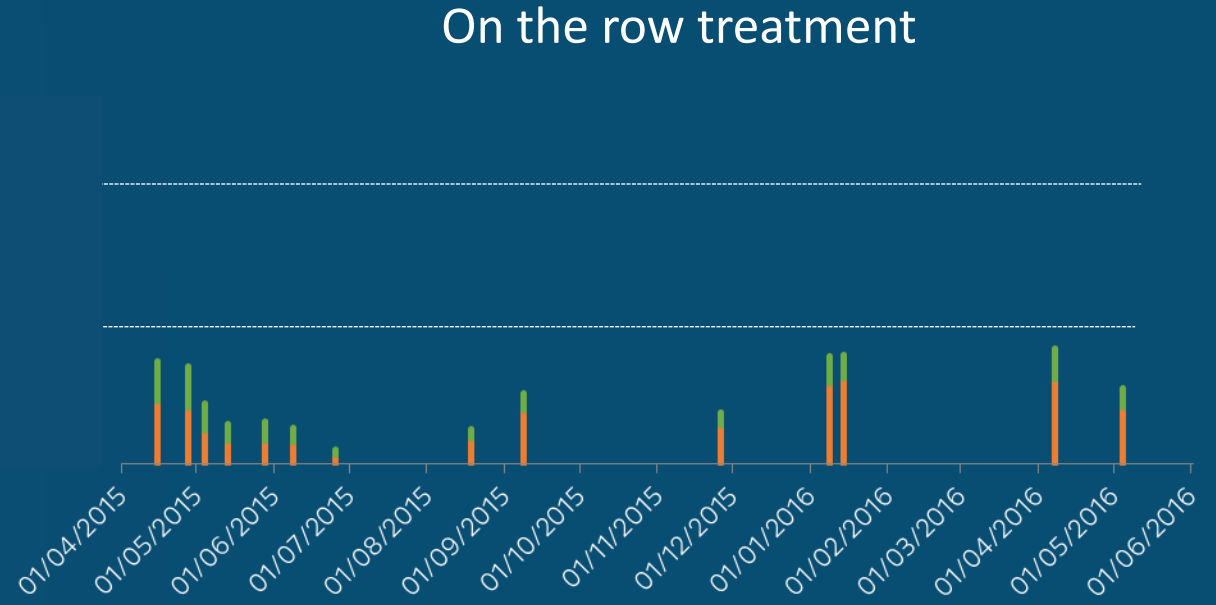

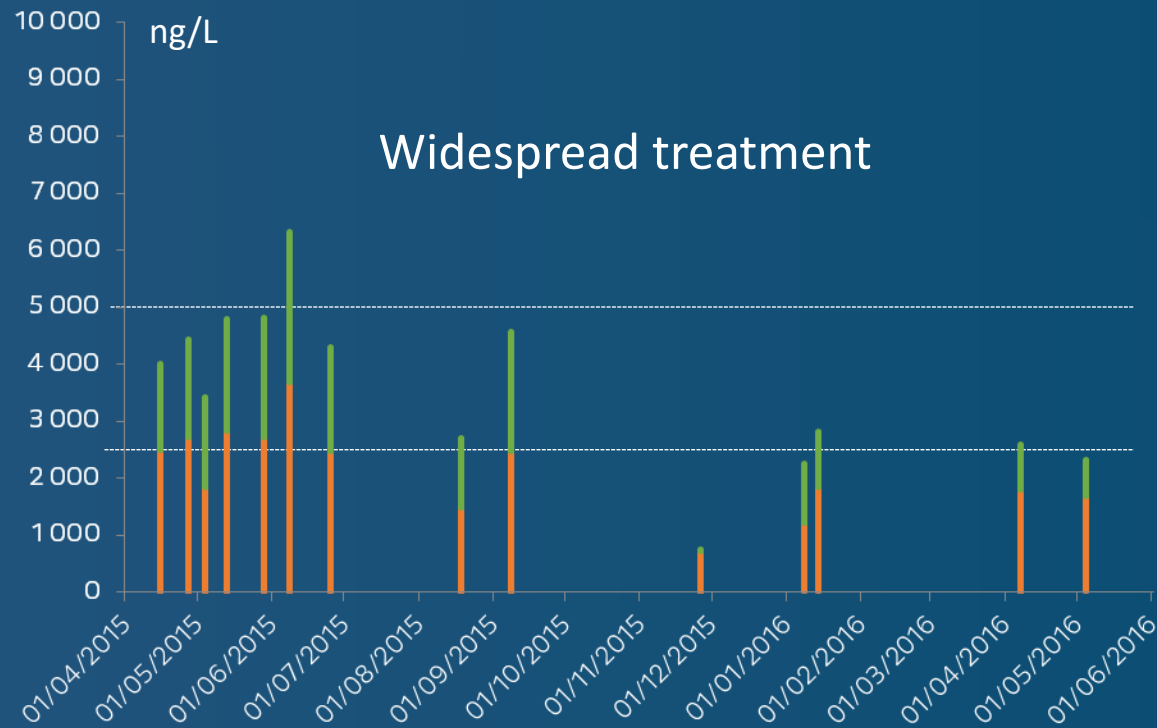

Local treatment on the row

Wide spraying treatment

Metolachlor and metabolites monitoring in groundwaters

Metolachlor OA

Metolachlor ESA

Assistance and guidance of municipalities

Transition to zero pesticide since 2008
for municipalities

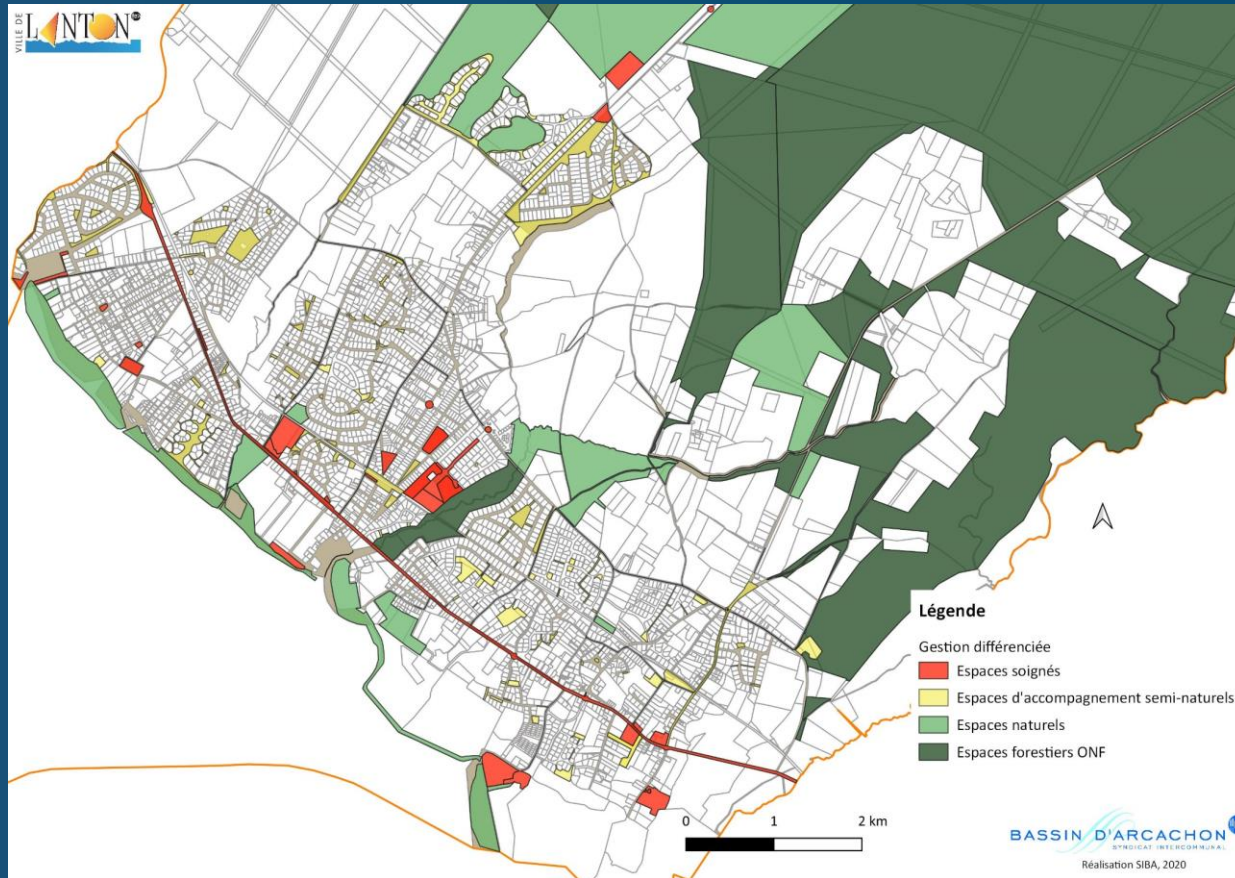

↓
Labbé law in 2017 banning the use of pesticides
for maintenance of green spaces belonging to
public entities and then in 2019 for private users

Method changes for green space maintenance: differentiated management

Assistance and guidance of municipalities: differentiated management

Aim: to not apply the same management to all urban spaces in order to be more compatible with environmental preservation

New legislation banning pesticides for cemeteries and field sports

2022

2025 for fields with restricted access

Assistance and guidance of municipalities: CITECO PROJECT

Launch of a new project in 2021: assisting municipalities into managing cemeteries and sport fields without pesticides

Cemeteries

Transition from mineral sites
to refuges for local
biodiversity

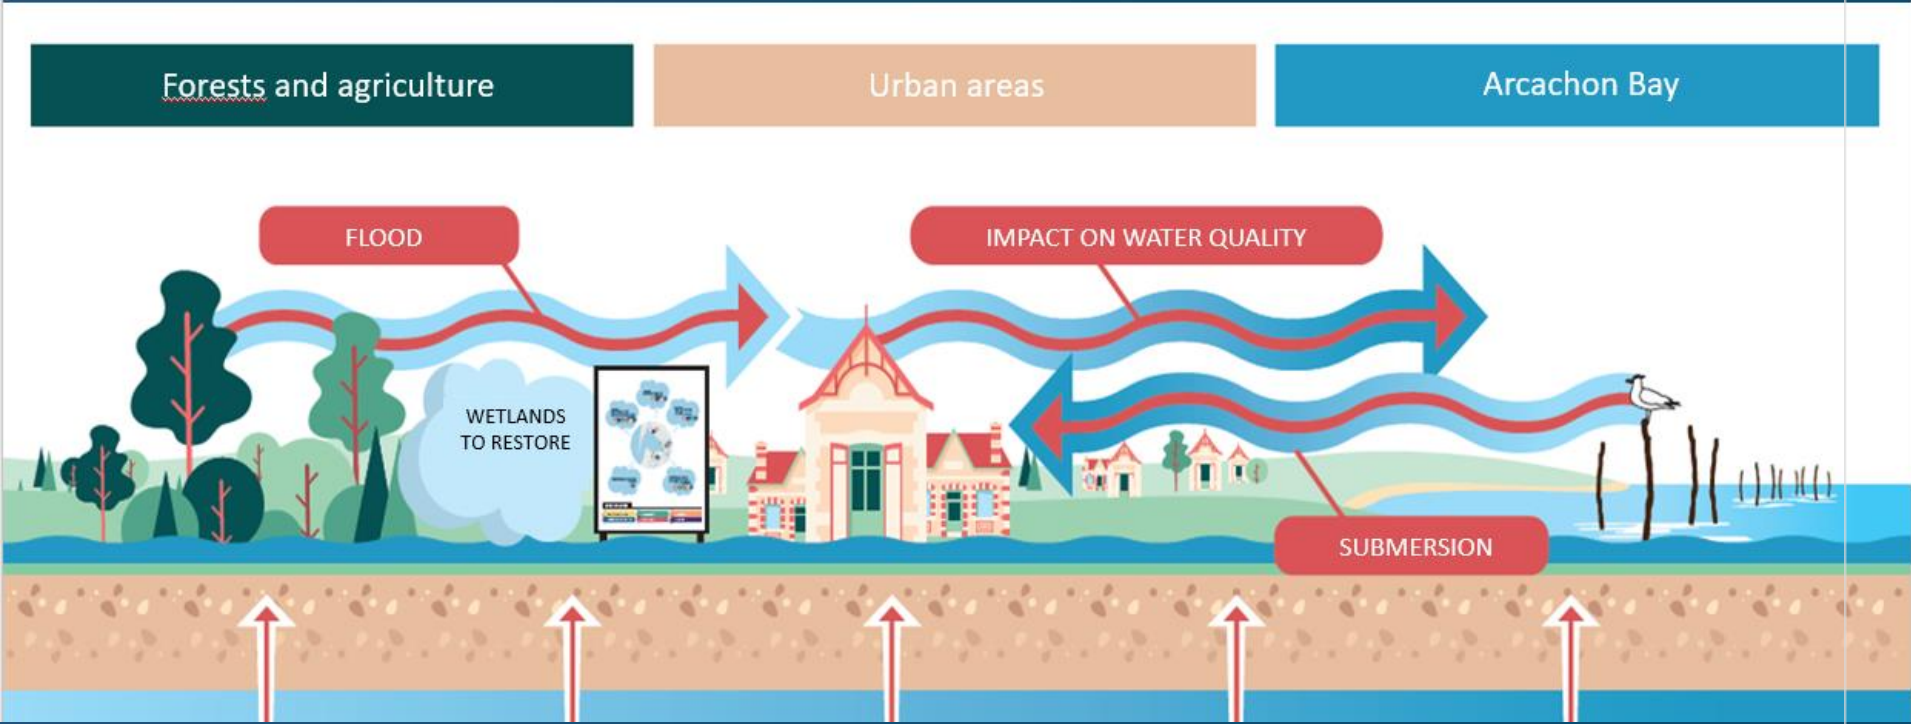

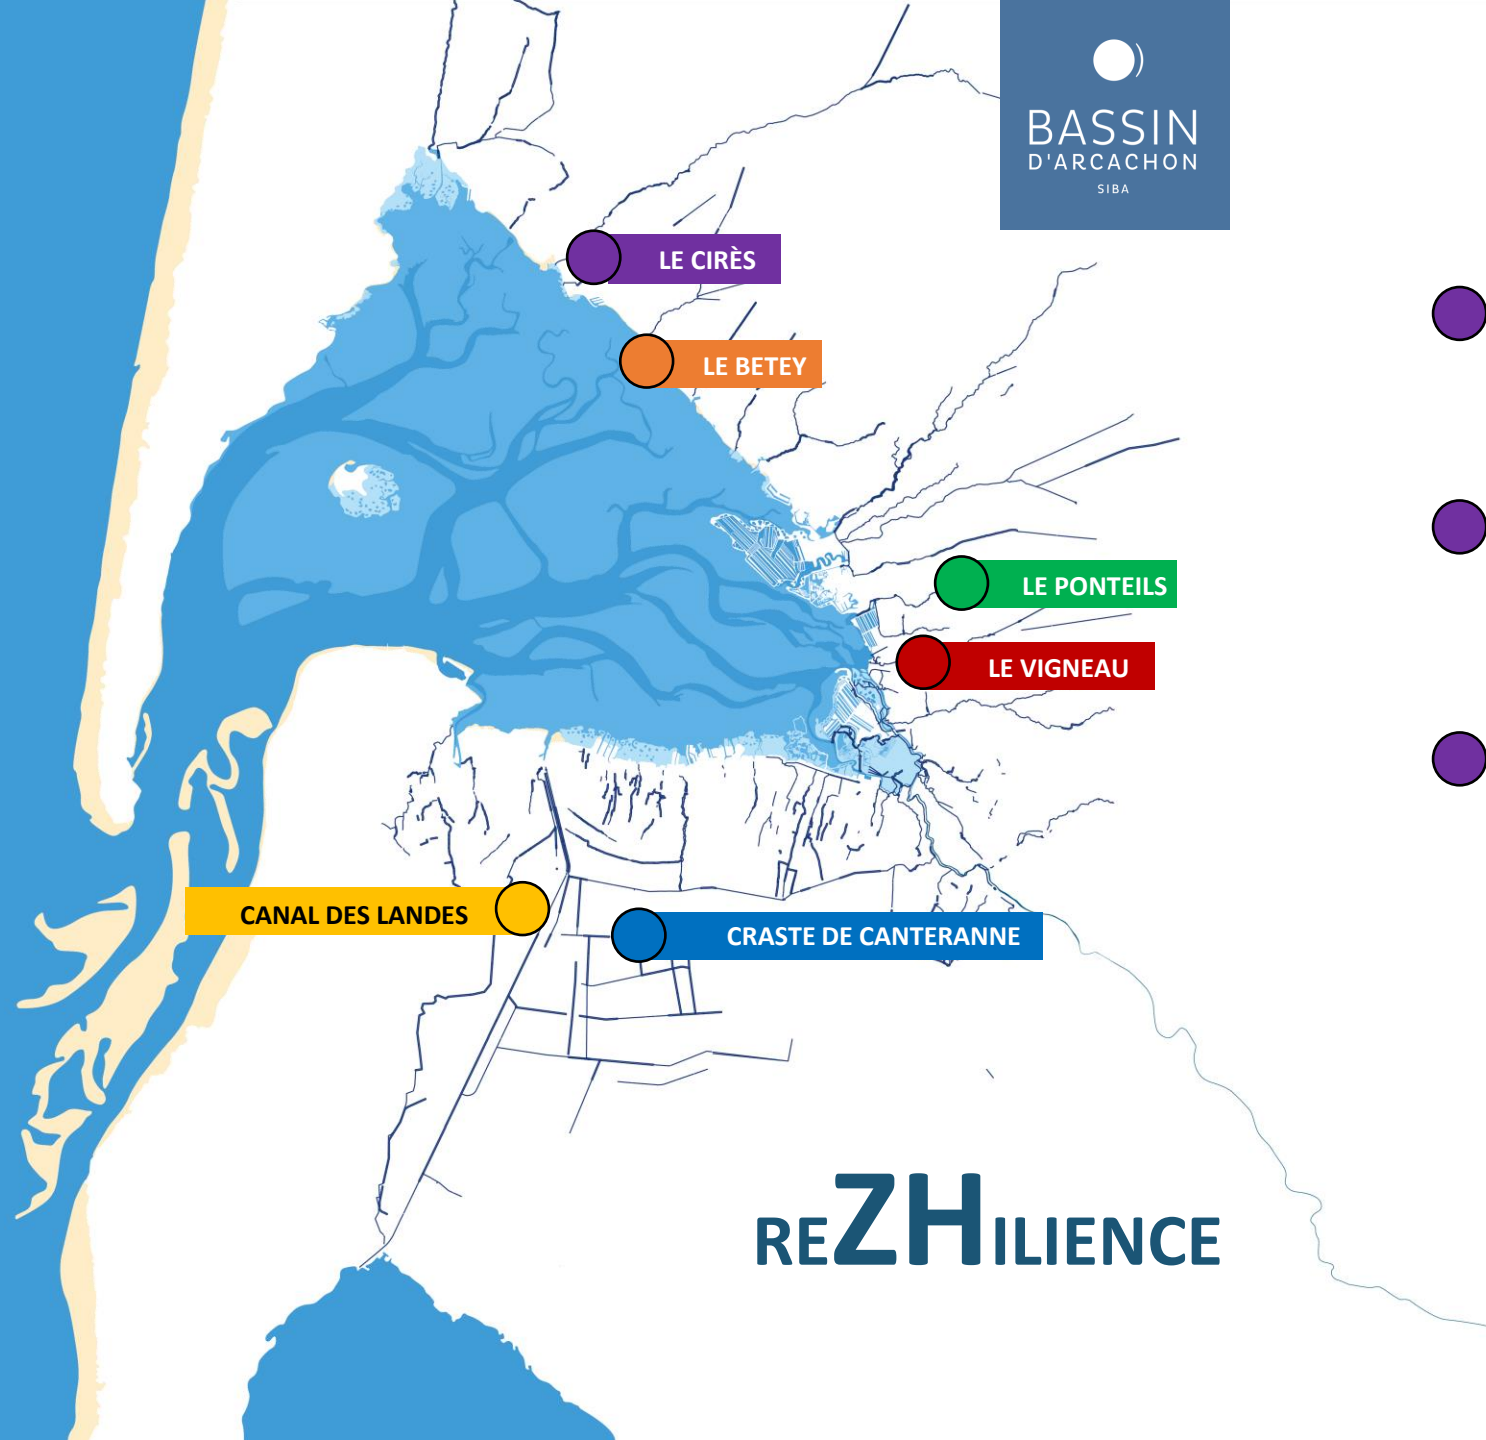

- **Individual counselling** (site assessments, recommendation of different approaches for maintenance and landscaping, etc.) ;
- **Collective counselling** with all cities involved to allow feedbacks between municipalities that often share same issues.

ReZHilience project

Wetlands restauration in rivers basins heads for the Bay resiliency improvement

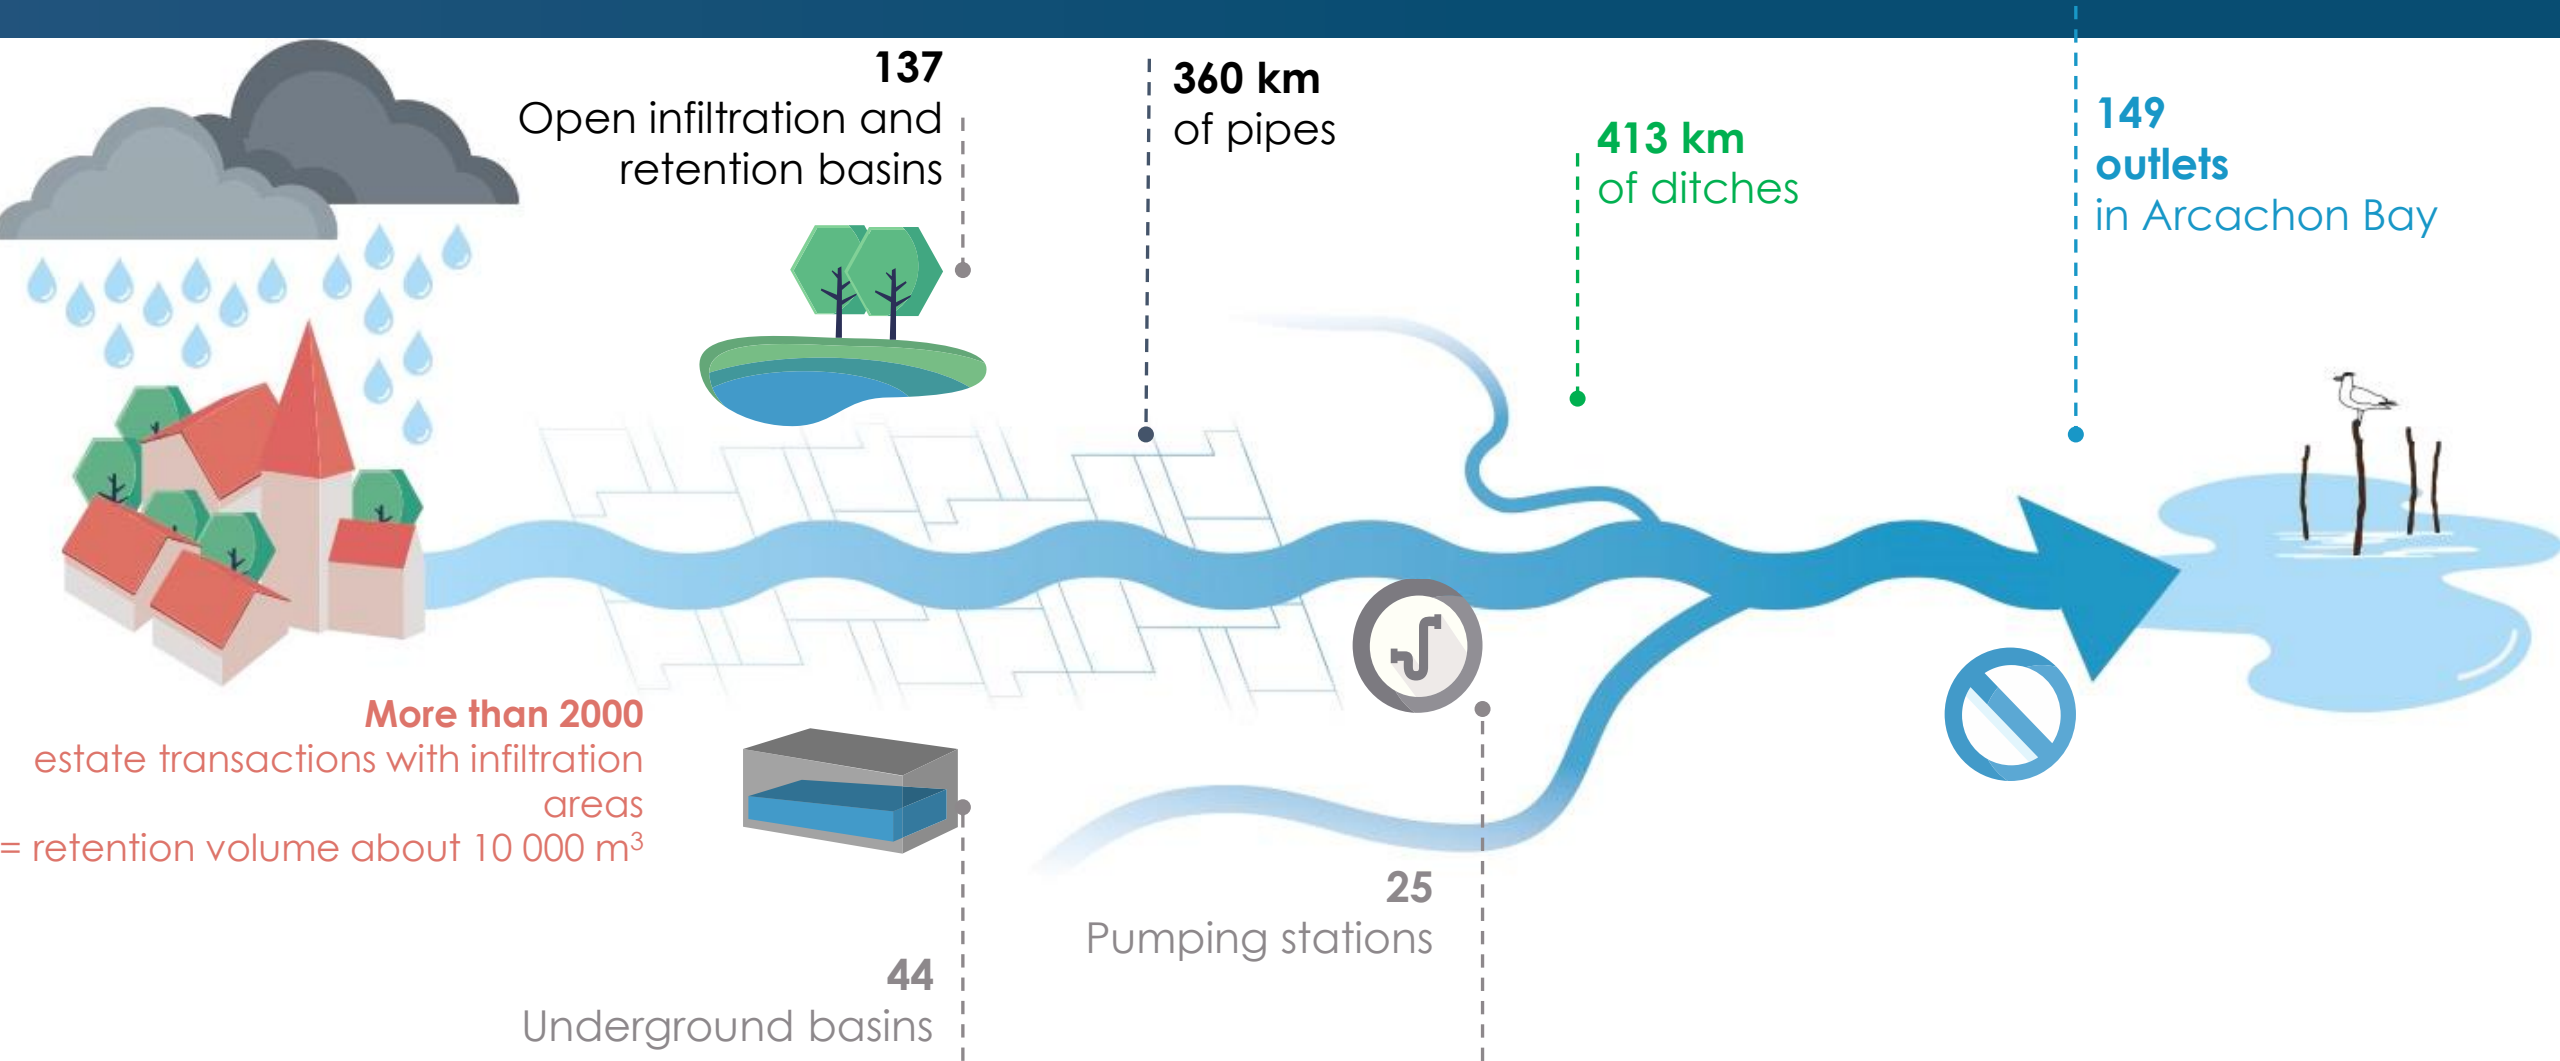

REZHILIENCE

BASSIN
D'ARCAÇON
SIBA

- Run off water collect and retention
- Water infiltration through sandy soil (filter)
- outout of infiltrated water to the groundwater

overflow

Sandy soil

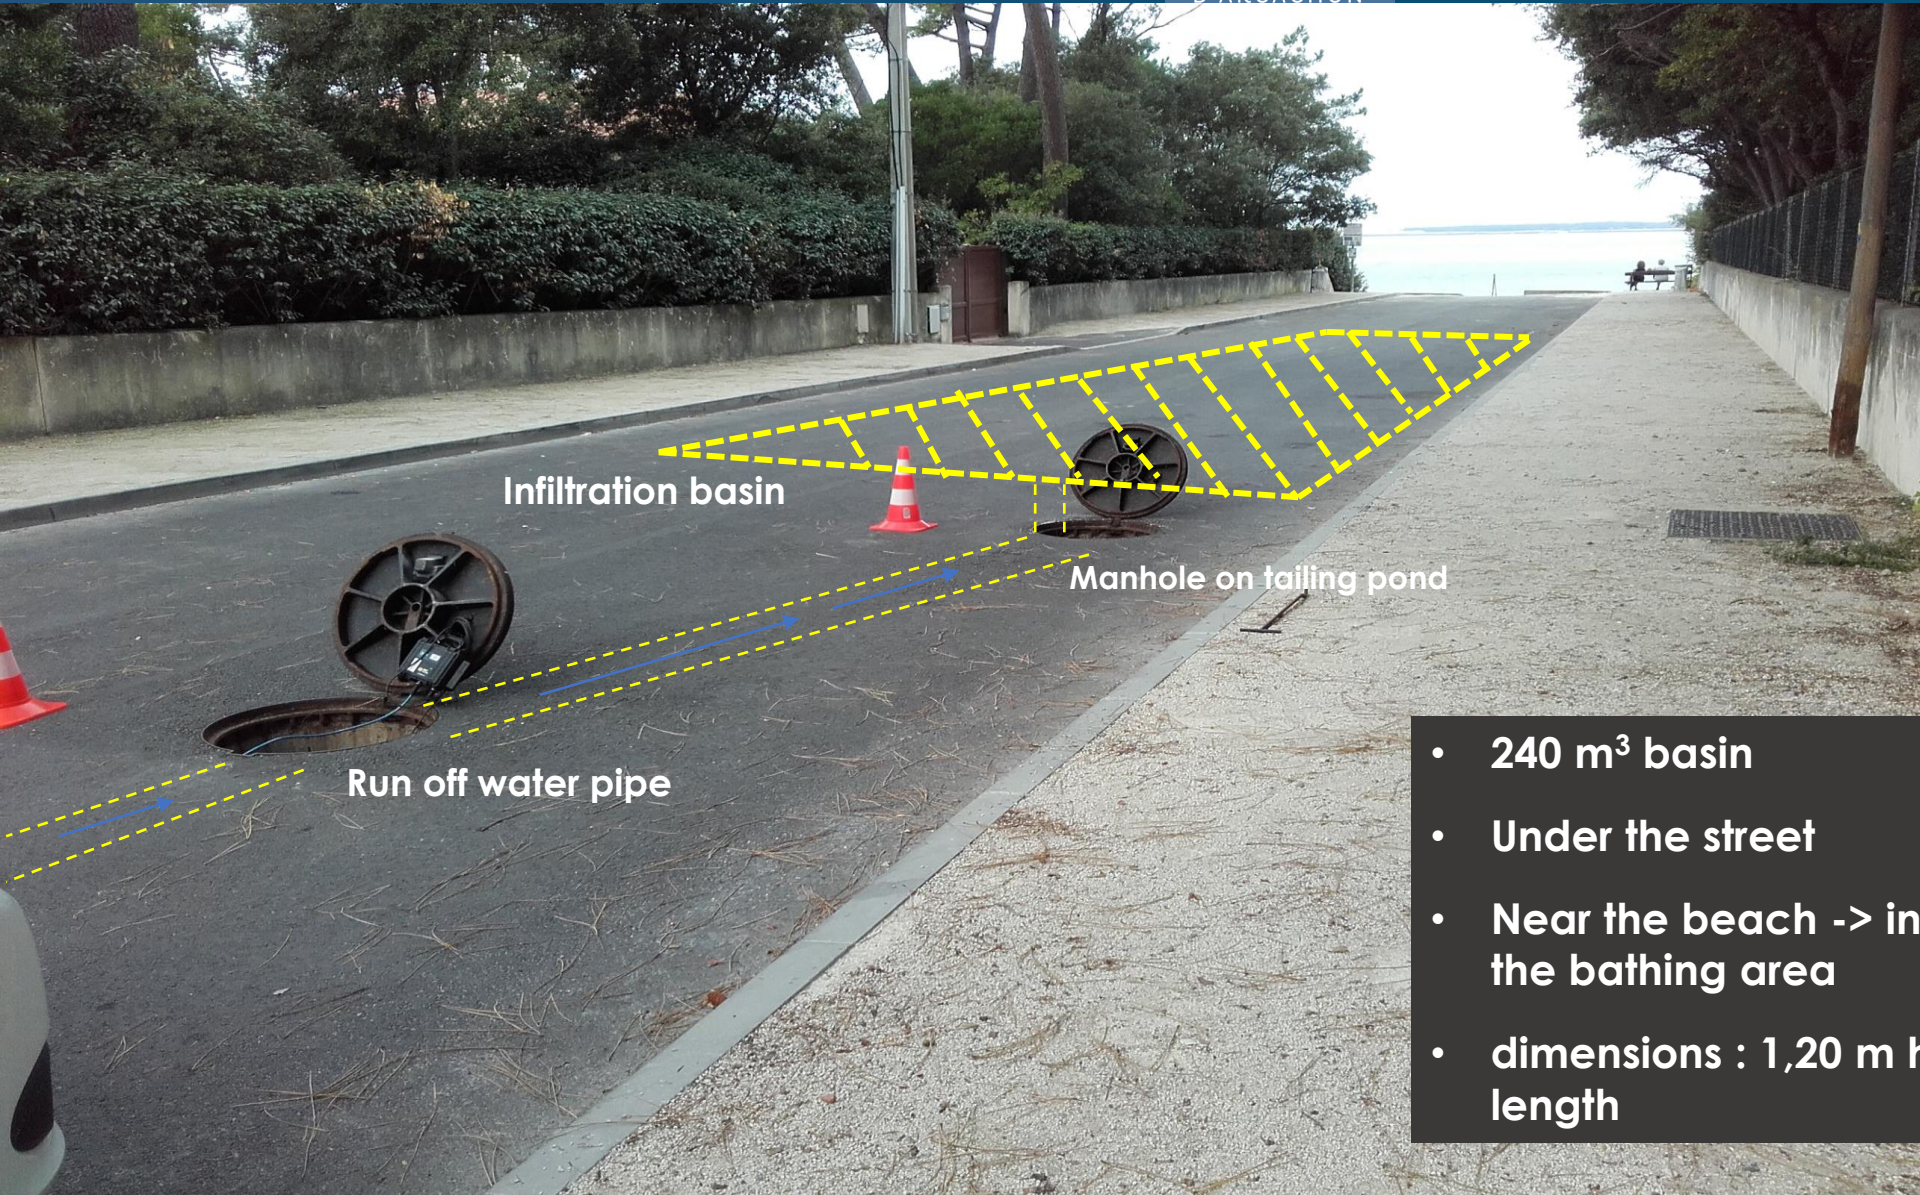

Sandy soil

groundwater

Infiltration basin

Tailing pond

Run off water input

- 240 m³ basin
- Under the street
- Near the beach -> intercept run off water before the bathing area
- dimensions : 1,20 m height, 4,80 m width, 38,50 m length

Open Discussion : Experience of other territories

Example of actions to reduce footprint in fresh and marine waters

Specifically : do you have any feedback on wetland restoration ?

PART I: FRESH AND MARINE WATERS

9.30 How to develop a sampling strategy adapted to **diffuse pollution**?
10.15 Example of the Arcachon Bay

10.15 **How to analyze the results efficiently for coherent and relevant actions?**
11.00 **Data bases - Optimizing data use**

Break

PART II: WASTE WATER TREATMENT

12.00 **From microbiology to micropollutants**
12.45 Systems and treatments currently in use on our territory

12.45 Questions, Conclusions and Open call for further cooperation
13.00

From microbiology to micropollutants

Systems and treatments currently in use on our territory

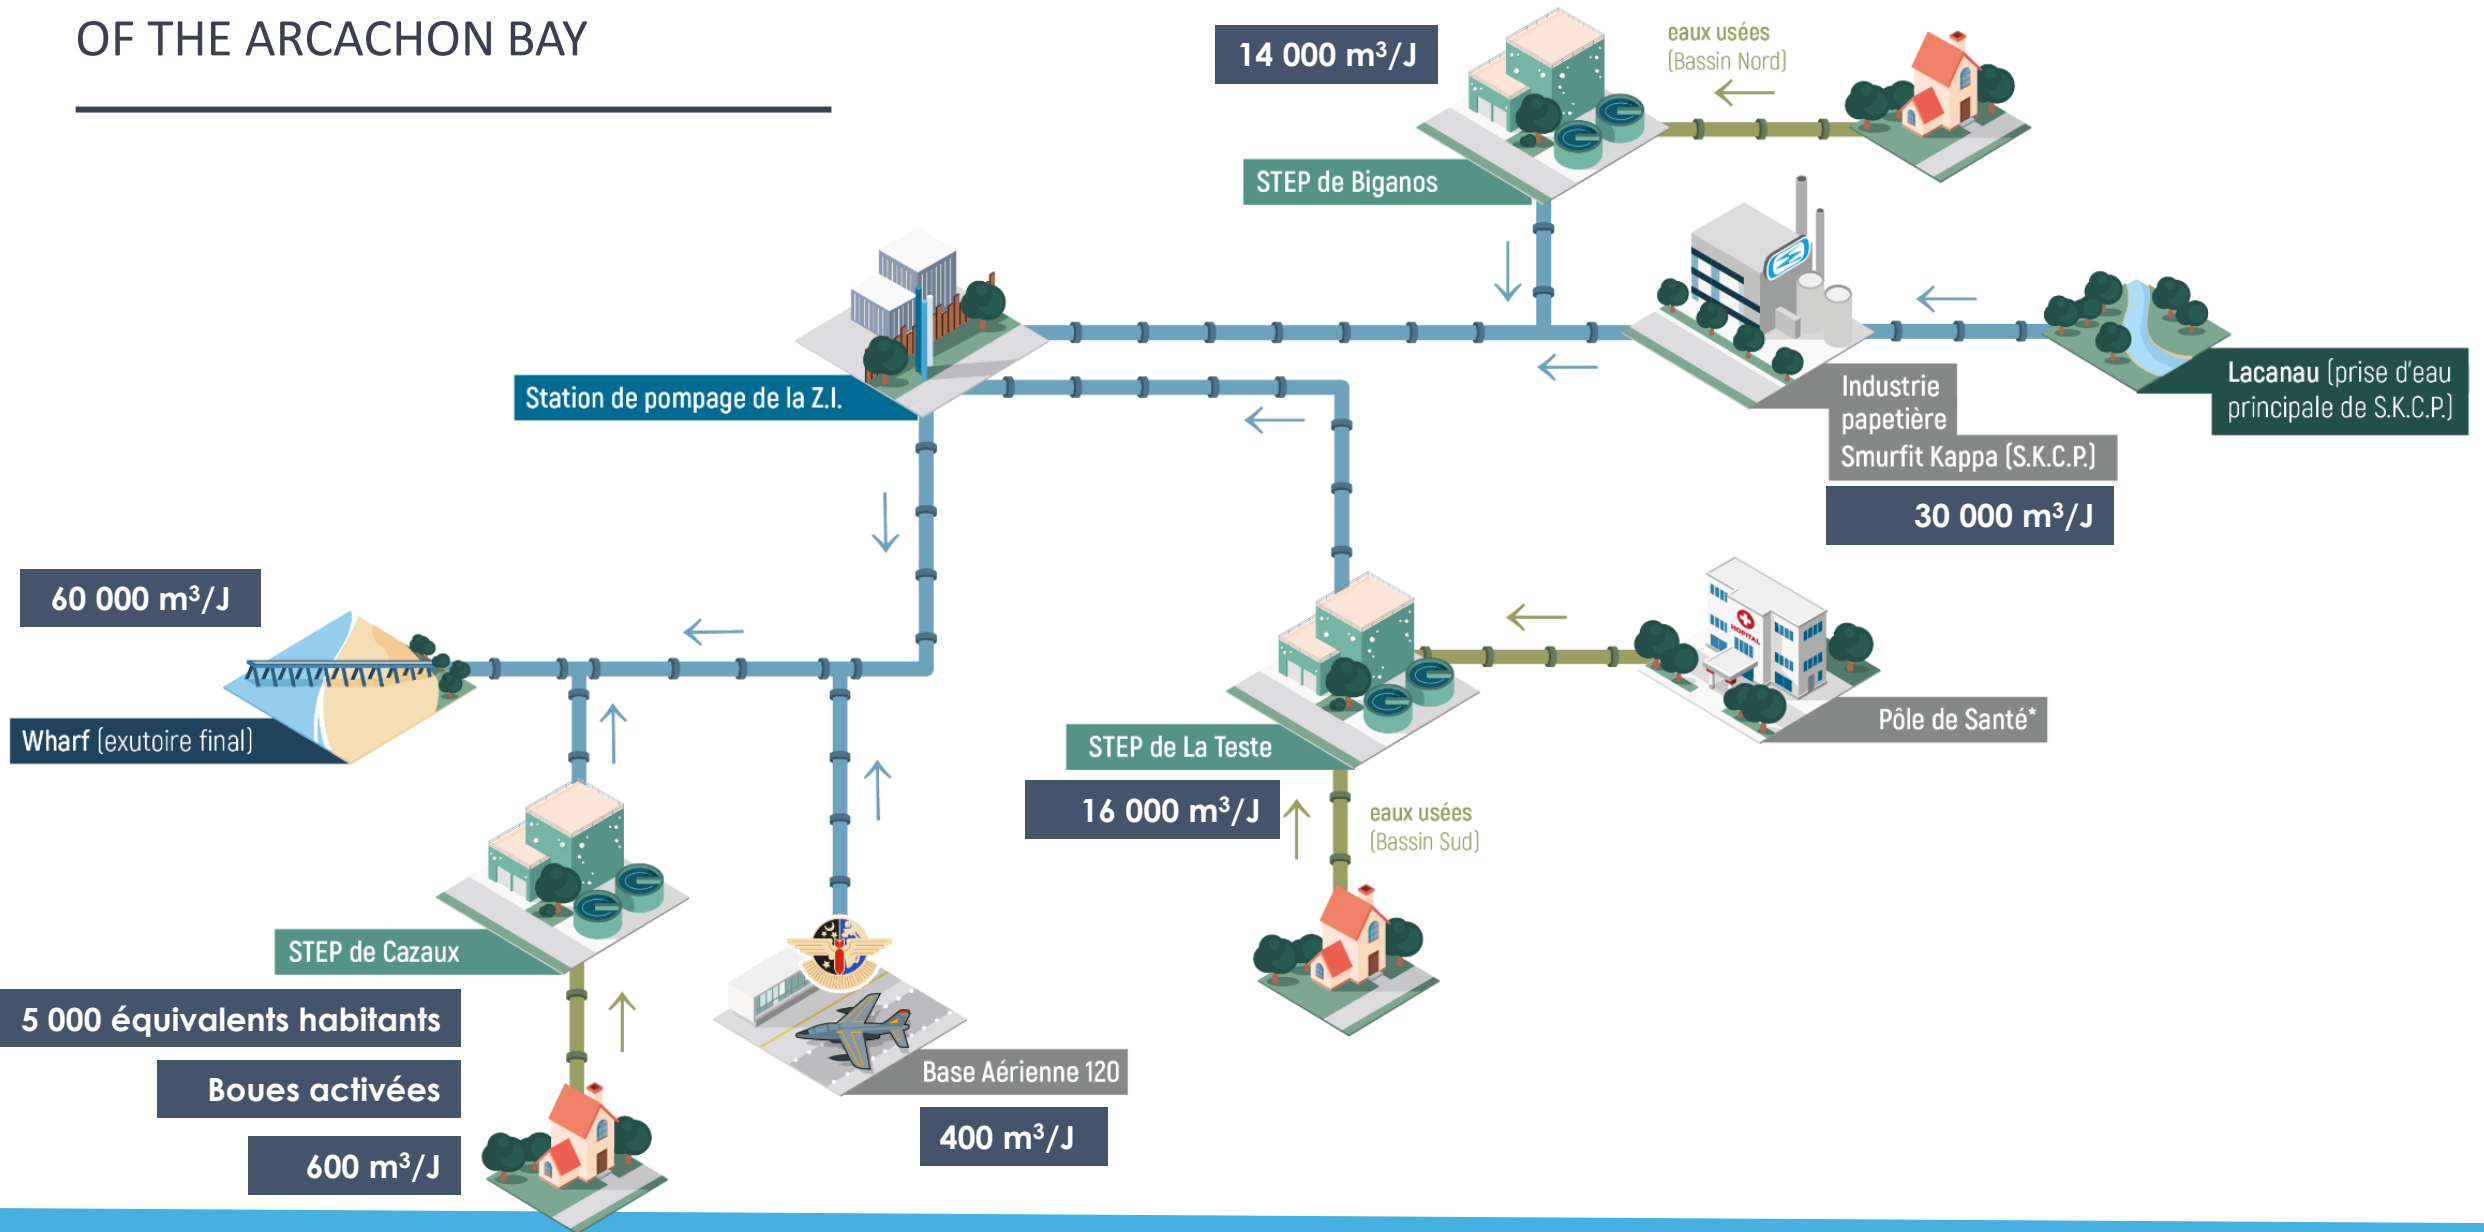

WASTEWATER TREATMENT SYSTEM OF THE ARCACHON BAY

-  SYNDICATE WASTEWATER TREATMENT PLANTS
-  PRIVATE WASTEWATER TREATMENT PLANTS
-  MAJOR PUMPING STATIONS FOR THE TREATED WATERS OF THE MAIN COLLECTOR
-  MAJOR PUMPING STATIONS FOR THE RAW WATERS OF THE MAIN COLLECTING PIPE
-  STORAGE BASIN FOR RAW WATERS
-  STORAGE BASIN FOR TREATED WATERS
-  COLLECTING PIPE FOR RAW WATERS
-  COLLECTING PIPE FOR TREATED WATERS
-  SECONDARY WASTEWATER NETWORK
-  PIPE REPLACEMENT

WASTEWATER TREATMENT SYSTEM OF THE ARCACHON BAY

STEPS OF THE WASTEWATER TREATMENT

4 UV WATER
DESINFECTION

2 DESILTING / DEGREASING
DECONTANTATION

3 BIOLOGICAL
FILTRATION

1 SCREENING

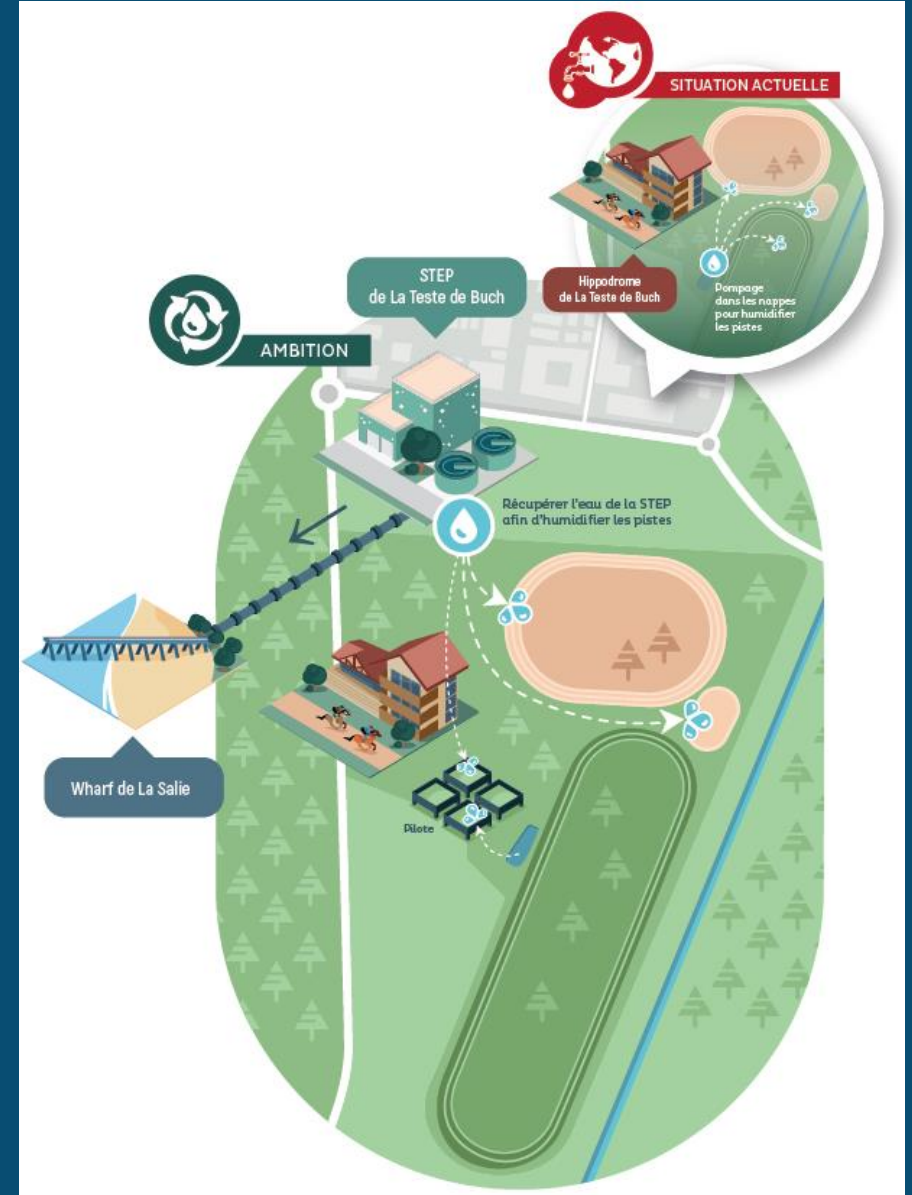

TREATED
WATERS
OUTPUT

WASTE
WATERS
INPUT

From microbiology to micropollutants

Research perspectives

- Bacteria and viruses reduction by UV treatments
- Improving micropollutants and microplastics treatments
- Waste waters reuse

Waste water treatment

From microbiology to micropollutants

Open Discussion : Experience of other territories
